

Bill Validator & MICR Check Reader

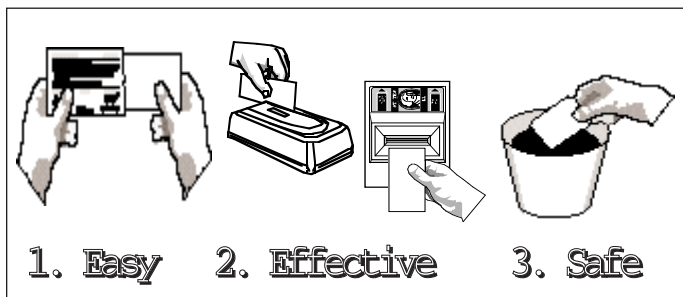

Cleaning Cards With Your Choice of Alcohol Free or IPA Solution

Bill validators and changers, verifiers and acceptors use a magnetic or optic head to read the special ink used in the printing of the currency. Check readers use a magnetic head to read the MICR encoding on the bottom of the check. Reader failures and errors are linked to dirty reader heads caused by poor maintenance; contaminants damage reader heads. After several hours of use the reader head can begin to accumulate heavy dirt caused by pollution, oxides, oil and exposure to the elements.

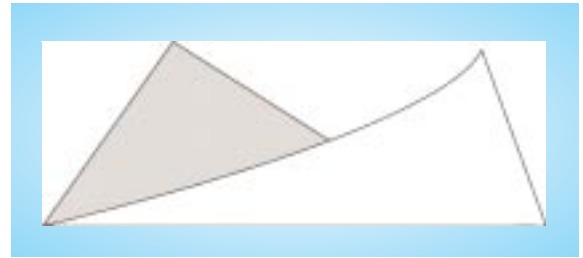

What is a Cleaning Card?

If reader heads are not cleaned, the validator/acceptor will reject the currency; the check reader will not properly identify the encoding resulting in processing delays. Poor maintenance is attributed to over 80% of equipment failures. Our technically advanced cleaning cards are specifically designed for these reader heads to allow for preventative maintenance without dismantling. Each cleaning card is conveniently pre saturated and sealed in foil to insure a clean card and the proper amount of solution for each cleaning. They are supported and laminated with a lint free non-abrasive material on both sides so that the reader head, feed path and transport rollers can be cleaned at the same time. Therefore, they will effectively remove the heavy dirt caused by pollution and continuous use. Our cards are designed to clean the latest equipment and are unconditionally guaranteed.

The not so hidden costs of neglect include customer dissatisfaction, frequent service calls and lost production. Our Cleaning Card keeps expensive professional visits limited to a minimum.

FEATURES AND BENEFITS:

What Equipment Will These Cards Work On?

- Bill Changers & Verifiers
- Check Readers
- Currency Counter
- MICR
- Bill Validators & Acceptors

Why You Should Use Cleaning Cards?

EASY – EFFECTIVE – SAFE

- Minimal expense and labor to decrease the number of service calls.
- The cleaning process takes 15 seconds or less.
- Mistake proof - the card will clean both sides.
- One-step, on the spot solution: Open-Insert-Dispose
- Customer convenience.

Benefits You Will See

Run a cleaning card through your equipment at scheduled intervals. When used daily, they drastically reduce the number of read errors and decrease the number of service calls.

- Saves Money: Reduce your service calls.
Reduce your costs.
- Reduces premature equipment replacement.
- Saves Time: No downtime waiting for repairs.
- Results: Customer satisfaction.
Prevents errors when scanning bar codes or when information is entered manually.

Today's equipment requires more attention to preventative maintenance than ever before. We specialize in developing products for cleaning concealed equipment components.

Heading straight to the top as your one-source supplier of Cleaning Cards and Kits for your preventative maintenance needs
