

Dual Action Cleaning Pen

Sticky Adhesives Burnt onto your Print Head?

Remove Adhesive Build-up for Crisp and Clear Prints.

How Cleaning Products Work

Cleaning products allow for a thorough cleaning of transaction devices, such as card and check readers, lottery ticket readers and receipt printers, without costly outside technical assistance. Used as preventive maintenance or to quickly correct device errors, these products remove dirt and other contaminants that inhibit the device from working properly.

Each transaction device requires specific cleaning products. Choose the right product for your device for proper maintenance.

Dual Action Cleaning Pen

Ideal Cleaning for

Thermal Print Heads

Direct Transfer Printers

Ribbon Transfer Printers

Thermal Printers accumulate adhesive residue from label stock as well as pollutants from the environment. The high temperature of the print head will migrate adhesives from the label stock to the print head, causing imperfections in the print. These imperfections create illegible receipts or cause barcode and optic scanners to misread information. If not properly cared for, contaminants will layer onto the print head until it becomes a "dead head".

The Dual Action Cleaning Pen is designed for cleaning accessible thermal print heads of adhesives and other contaminants. "Step 1" removes adhesive residue that most cleaners will not remove. "Step 2" cleans the print head of paper dust and other contaminants. Regularly removing this debris will extend the life of the print head and maintain a readable image. This pen is a reusable product, use before every media change and during the printing process if visible errors occur.

Available in boxes of 12 pens.
