Counterfeit Detection Systems

Stop thieves in their tracks with our new full spectrum UV lights.

Fraud-u-Lite Counterfeit Detector—Item# F-9932

The Fraud-u-Lite Counterfeit Detector uses 2 powerful full spectrum UV bulbs that can activate UV ink found on any currency, credit card, driver's license, travelers check, money order or other UV impregnated item. This sturdy unit is small enough to fit on a counter and can plug into any regular wall socket. (L=10 3/4", W= 4 1/2", H = 4 1/2")

Fraud-u-Lite Plus Counterfeit Detector—Item# F-9933

The Fraud-u-Lite Counterfeit Detector Plus uses the same bulbs as the Fraud-u-Lite Counterfeit Detector but adds an incandescent lamp for easy watermark detection. It also has a MICR (magnetic ink character recognition) unit that "chirps" and lights up a red LED when a real US bill is passed over it. This unit is great for older bills that do not have the UV stripe and other documents and currency that utilize watermarks for security purposes. (L=10 3/4", W= 5 1/2", H = 5 1/2")

Place currency, credit cards, money orders, ID's, passports, and other secure documents under Counterfeit Detector to check for security features and stop counterfeiters in their tracks.
